Appointment Date: 06-Dec-2025

Date Closed: 18-Dec-2025 02:01 PM

Study type: Echocardiogram - WI/IL

Patient Name: Empress Figment of Your Imagination	Weight: 70 lbs
Species: Canine	Hospital Name: Empress Labradors
Breed: labrador	Referring Vet: Dawn Nacey
Sex: Female	Imaging Performed By: Kim Liedberg
Age: 3 years and 1 week old	Interpreted By: Brittany Stewart, Nekesa Morey

PRESENTING COMPLAINT

What did the patient present for? What are his/her symptoms?
 no symptoms

Current Medications
 none

Relevant clinical exam findings and abnormal lab values
 none

Differential diagnoses
 none

ECHOCARDIOGRAM

ECHOCARDIOGRAM FINDINGS

The left atrium appears within normal relative to the root of the aorta (Swedish LA/Ao 1.45; overestimated in select view secondary to foreshortening of the aortic root). LAD (lax) 36.5 mm. Normalized LVIDd is within normal at 1.38. Right sided chambers are of appropriate size. Left ventricular systolic function appears adequate based on fractional shortening (33%) and wall motion. The ventricular walls measure within normal thickness and demonstrate normal echogenicity; during diastole IVS 0.98 and PW 0.88 cm. The main pulmonary artery appears of normal size relative to the aorta. No evidence of thrombus or filaria noted within the visible arterial system. No evidence of pericardial or pleural effusion is appreciated. PV outflow 0.8 m/s. AV outflow 1.8 m/s. MR not available. TR 20 mmHg. Mitral inflow E/A ratio is within normal. Tissue Doppler not available. Absent MR, mild TR, absent PI, absent AI; color aliasing appreciated. No evidence of a cardiac associated mass captured. Echo ECG not available.
